

Control Knob Removal From Control Panel Instruction Manual

Tools Required: 5/64th Allen Wrench

www.mygrillparts.com

WARNING

Close the propane tank valve by turning it clockwise and then remove the regulator from the propane tank, or detach the natural gas line, before beginning any grill repairs or service.

1

Use a 5/64ths allen wrench to release the screw that holds the knob.

*Step 1 alternate view

2

Gently pull the control knob to remove it from the valve stem.

3

Once the knob has been removed, the valve stem will be exposed.

Reassemble the grill using these instructions in reverse order, and perform a gas leak test pursuant to the warning and instructions in the Owner's Manual before using your grill.
